

Our Philosophy

It has always been the philosophy of the founders of Sigma Health care to provide a better care by utilizing innovative technology that is more familiar to patients at lesser cost. This has always been practiced with the purpose of increasing the quality of care for chronically ill patients in the convenience of their homes. This philosophy allows our company to be a pioneer in high tech home health care, disease management, and the technology behind them.

Why Remote Monitoring?

The purpose of Sigma's Remote monitoring program is to improve the quality of life for individuals with chronic illnesses by preventing or minimizing adverse events resulting from those illnesses, which usually lead to hospitalization and ER visits. We accomplish this by integrating our proprietary telecommunication technology with a timely and appropriate clinical intervention through centralized care coordination
